

Dr. George Canellakis, Northeast Urologic Surgery, P.C.'s leader in in-office Urolift procedure, attended the NeoTract Summit for Advancing the Treatment of Enlarged Prostate on March 10, 2018.

NeoTract has pioneered the UroLift System, which is FDA-cleared and is the only treatment that uses the Prostatic Urethral Lift (PUL) procedure. The UroLift System treatment is a proven, minimally invasive approach for treating lower urinary tract symptoms due to benign prostatic hyperplasia (BPH) that can get men off BPH medications and avoid major surgery. The UroLift System's permanent implants, delivered during a minimally invasive outpatient procedure, relieve prostate obstruction and open the urethra directly without cutting, heating, or removing prostate tissue.

As with any medical procedure, individual results may vary. Speak with your urologist to see if the UroLift System treatment is right for you. Most common side effects are mild to moderate and include pain or burning with urination, blood in the urine, pelvic pain, urgent need to urinate and/or the inability to control the urge. Most symptoms resolve within two to four weeks after the procedure. UroLift is not covered by all insurances at this time (June,2018).
